Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A) Description: serine/threonine-specific protein kinase
A;Note: contains low activity as tyrosine-specific protein kinase
A;Note: contains low activity as tyrosine-specific protein kinase
A;Note: contains low activity as tyrosine-specific protein kinase
C;Superfamily: protein kinase SPK1; kinase interaction domain homology and any activity for a serine/threonine-speci
F;68-133/Domain: kinase interaction domain homology activity
F;106-466/Domain: protein kinase homology activity
F;204-213/Region: protein kinase ATP-binding motif
F;207/Active site: Lys #status predicted

In Programmer Via S-phase checkpoint as well as G1 and G2 DNA damage checkpoints. Phosphorylates proteins on serine, threonine, and tyrosine. Prevents entry into anaphase and mitotic exit after DNA damage via regulation of the Polo Kinase CDC5. Seems to be involved in the phosphorylation of RPH1.

--- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

--- SIMELARITY: Belongs to the Ser/Thr protein kinase family.

--- SIMILARITY: Contains 2 FHA domains.
                                                                                                                                                                                                                                                                                                                                                                                                                  PHÖSPHORYLATION.

"Creation of the YELX clone resource: cloning of Saccharomyces cerevisiae ORFs in the Gateway recombinational cloning system.";

Submitted (JUL-2004) to the EMBL/GenBank/DDBJ databases.

-i SIMILARITY: Belongs to the Ser/Thr protein kinase family.

SIMILARITY: Belongs to the Ser/Thr protein kinase family. CDS1
                                              Lindsay H.D., Griffiths D.J.F., Edwards R.J., Christensen P.U., Lindsay H.D., Griffiths D.J.F., Edwards R.J., Christensen P.U., Murray J.M., Osman F., Walworth N., Carr A.M.; "S-phase-specific activation of Cds1 kinase defines a subpathway the checkpoint response in Schizosaccharomyces pombe."; Genes Dev. 12:382-395(1998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              while DNA synthesis is in progress.
CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
SUBUNIT: Interacts with rad26.
                                                                                                                                                                                                                                                                                    MEDLINE=21848401; PubMed=11859360; DOI=10.1038/nature724;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HSSP, 000534; 1JOW.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note=No experimental Confirmation available;
Note=No experimental Confirmation available;
DOWAIN: The FHA domain may be required to interact with
phosphorylated proteins (By similarity).
PTM: Autcoubiquitinated in vitro (By similarity).
PTM: Phosphorylated by PKB. Phosphorylation may affect its E3
ligase activity (By similarity).
SIMILARITY: Contains 1 FHA domain.
SIMILARITY: Contains 1 FMG-type zinc finger.
CAUTION: According to some authors it can ubiquitinate and promote
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and mouse cDNA sequences."

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!- FUNCTION: E3 ubiquitin-protein ligase required to transiently arrest cells in early prophase when they are exposed to microtubule poisons. Acts in early prophase before chromosome condense, when the centrosome move apart from each other along the periphery of the nucleus. Probably promotes the formation of Lysebalinked polyubiquitin chains and functions with the specific ubiquitin-conjugating UBEC13-MMS2 (UBE2N-UBE2N2) heterodimer.

Substates that are polyubiquitinated at Lys-63 are usually not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                targeted for degradation, but are rather involved in signaling cellular stress. This suggests that it may be involved in signaling the presence of mitotic stress caused by microtubule poisons (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PATHWAY: Ubiquitin conjugation; third step.
SUBCELLULAR LOCATION: Nuclear (By similarity).
